TO WHOM IT MAY CONCERN

Industrielle Werke Basel (IWB) was challenged with severe problems with both the municipal waste incinerator and the boiler feed water to our thermal power station. As the result of close collaboration and leadership by Ciba Expert Services, particularly Uwe Schüle, we successfully eliminated our problems and effectively optimized plant performance. More specifically, we doubled on-line operating time between cleaning cycles associated with the blow down water treatment of the municipal waste incinerator as well as drastically reduced the operating costs for the boiler feed water plant. Over the last two years, both operations have run perfectly with additional benefits realized in reduced maintenance costs.

Ciba Expert Services is our partner of choice and comes highly recommended.
