- Global Legislation Development and Training

# Ciba Regulatory Services helps customers in highly regulated industries achieve local, regional and international compliance.

Ciba Regulatory Services provides a comprehensive regulatory resource for customers to develop and implement worldwide regulatory strategies. It is independent from laboratory testing houses and includes services related to new product introductions, data development as well as compliance of existing products with local and global regulations.

The services are based on Ciba Expert Services' extensive global regulatory knowledge and decades of practical experience dealing with chemicals law. The organization has offices located around the world and has established a strong, direct network with local as well as regional trade associations and government authorities. The experts speak the local language and live the local culture. The service offering covers chemicals, formulations, polymers and end use articles to be commercialized in domestic and international markets. Clients benefit by enjoying lower costs through outsourcing, and extended global reach, convenient one-stop shopping and reduced time to market.
